

Change of categories of injected units.

Until January 25, 2015 units were categorized into four categories according to the facilities racing features and possibility of settings of speed limiter :

version A	without racing functions, maximum RPM limiter as original unit
version B	with function clutchmaster (quickshift), maximum RPM limiter as original unit
version C	with function clutchmaster (quickshift) and gear shift light, maximum RPM limiter as original unit +1000
version D	all racing function, RPM limiter unlimited

From 26.1.2015 are units categorized into three categories according to the facilities racing features. All versions have unlimited RPM limiter settings :

version A	without racing functions
version C	with function clutchmaster (quickshift) and gear shift light
version D	all racing function

The change applies to all standard injection units (Ignijet 2007 Ignijet 2008 Ignijet Ducati).

Customers owning an older unit categories A, B and C (which is limited by the RPM limiter settings) can be replaced free of charge firmware in the unit. After replacing the firmware will drive unlimited RPM limiter settings.
